UPGRADE & DEVELOPMENT PROGRAM

Improve your SOLIDWORKS upgrade process and ensure your team are on top of their game with the SOLIDWORKS Upgrade and Development Program.

This program has been specifically designed to service our customers who need support with the annual upgrade of their software or who desire to push their team to achieve exceptional performance in their roles.

Solid Solutions' engineers take end-to-end ownership of your software upgrade, thus reducing risk and enabling your team to remain productive throughout the upgrade process. Whether you only use SOLIDWORKS, if you also use PDM, or any of the other additional products we supply, we can tailor this program to meet your needs. For complex upgrades the program will include a test phase to ensure that your configuration and customization will work with the new release, ahead of the on-site upgrade of all installed SOLIDWORKS & PDM products on both server and client machines. The upgrade process can be completed with a 'What's New' session to maximise the return from your upgrade and ongoing SOLIDWORKS Subscription.

Terms & conditions:

If an upgrade is not planned within a 12 month period, this can be exchanged for up to 2 additional days' worth of development visits. Upgrades and visits must be used within a 12 month period and cannot be carried over into the next year. To ensure each upgrade cycle is fully validated. As part of the Upgrade Project, the incumbent database and user environment will be reviewed and a 'Statement of Work' supplied to act as the contract between both parties. If, during the contract period, the assistance required to complete the upgrade process changes so that the new requirements exceed those which were originally defined in the 'Statement of Work', additional consultancy days may need to be purchased.

Reduce the burden of your SOLIDWORKS upgrade

The SolidWorks Upgrade and Development Program also includes an additional 2 days' worth of on-site user development sessions which include:

- Technical Audit - Design Process Review & Road Map
- Health Check
- SOLIDWORKS User Skills Assessment
- What's New Catch Up
- Large Assembly Advice
- Best Practice - Design Team
- Best Practice - CAD Managers
- Strategic Value Assessment
- Tips & Tricks
- Support Day

Get in touch now to find out more or discuss how we can cater to your own specific requirements.
